

Minor Error in Table 5.4

In Table 5.4, we listed the regression results for models that use a lagged measure of the margin of victory. For Japan 2005, we accidentally used the 2000 measure of the margin of victory when we were supposed to use the 2003 measure. We have corrected the data set for 2005 so that the lagged measure now is drawn from 2003 rather than 2000. The results do not change markedly: no coefficients that were statistically significant become nonsignificant, and none that were nonsignificant become significant. Moreover, the coefficient estimates do not change markedly. Nevertheless, we list the correct results (which are based on the data and command file now listed in the Replication materials) below.

Japan 2005, using margin of victory from 2003

1 st *Margin (t-1 election)	0.105 ^{***}
	(5.36)
2 nd *Margin (t-1 election)	-0.0853 ^{***}
	(-4.26)
Bottom*Margin (t-1 election)	-0.00206
	(-0.13)
1 st Place	0.0797 ^{***}
	(12.47)
2 nd Place	0.0522 ^{***}
	(8.34)
<i>Candidate Identity</i>	
SMD Incumbent	0.0520 ^{***}
	(6.13)
Incumbent Opponent	-0.0106
	(-1.40)
PR Incumbent	0.0202 ^{***}
	(3.71)
Returnee	0.0276 ^{***}
	(3.65)
<i>Controls</i>	
SMD candidates/PR parties	-0.122 ^{***}
	(-9.33)

Independent SMD Vote	-0.00148
	(-1.16)
Constant	0.0794***
	(7.09)
<i>N</i>	916
<i>R-squared</i>	0.694
	0.691

OLS models with *t* statistics in parentheses

All models are for candidates/parties at the SMD level

* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$
